Sow & Weaner PIG PELLETS

Sgt Dan SOW & WEANER PIG PELLETS are designed as a practical feed for lactating sows and their piglets from farrowing through to weaning.

High quality ingredients encourage high feed intakes required to support lactation and minimise bodyweight loss in the lactating sow and encourage good early growth rates in piglets.

Recommended feeding rate:

Lactating Sows

- Feed *ad lib*.
- Ensure clean fresh water is always available.
- After farrowing increase amount of feed offered each day by 0.5kg, until feed intake is around 8kg per sow per day. Intake will be affected by the number of piglets, size of the sow and milk production.
- Offer fresh feed at least daily.

Piglets < 4 weeks

- A suitable creep feed supplement can be made by mixing small amounts of **Sgt Dan Sow and Weaner** with a coccidiostat free milk replacer in a ratio of 5:1. Offer small amounts of this feed fresh each day to encourage early intake of hard feed and early gut development.

Piglets > 4 weeks – 3 months

- Allow piglets *ad lib* access to the **Sgt Dan Sow and Weaner** diet. Feed intake will increase with increasing piglet weight up to around 1kg per day at 20kgs.
- Expect to wean piglets around 8 weeks of age.

Typical analysis (As fed basis)

Minimum Crude Protein (%)	15
Maximum Fat (%)	4
Maximum Crude Fibre (%)	5
Maximum Salt (%)	1

Ingredients selected from:

Barley, Wheat, Grain By-Products, Peas, Soyabean Meal, Canola, Vegetable Oils or Fats, Limestone, Dicalcium Phosphate, Salt, Sodium Bicarbonate, Amino Acids (e.g. Methionine, Lysine, Threonine), Vitamins and Trace Minerals, Enzymes.
