## **Anionic Pre-Calving DAIRY NUTS**

Nutrition and management of the dry cow in the three weeks pre-calving can affect the production of the cow post calving. **Sgt Dan ANIONIC PRE-CALVING NUTS** are formulated to help ease the transition from a dry cow to a milking cow.

Formulated with quality New Zealand grown grains, **Sgt Dan ANIONIC PRE-CALVING NUTS** provide a source of starch to aid in adapting the rumen from high forage diets typically fed in the dry period. A variety of oilseed and protein meals are included to ensure that the nuts provide a minimum of 18% crude protein.

**Sgt Dan ANIONIC PRE-CALVING NUTS** contain anionic salts to help reduce the Dietary Cation-Anion Difference (DCAD) and aid in calcium metabolism, while added vitamins and trace minerals are included to support immunity.

Supplied as a 10mm nut the **Sgt Dan ANIONIC PRE-CALVING NUTS** are easy to feed in the paddock or with silage. This product can also be supplied as a 6mm pellet if required.

When fed at 2kg per cow per day this diet provides:

- 20g of magnesium
- 750mg zinc, 200mg manganese, 260mg copper, 8mg iodine, 10mg cobalt, 8mg **SELENIUM**, vitamins A and D3 and natural vitamin E
- 10mg chromium

### **Recommended feeding rate:**

- Feed at 2kg per cow per day.
- This feed is designed for feeding from a minimum of 14 to a maximum of 21 days precalving. Do not exceed the recommended feeding rates.
- Do not use at the same time as any other selenised fertiliser, prill or product and do not exceed the stated dose or frequency without consulting a nutritionist or veterinarian.
- Do not feed to lactating animals.
