Ezi-Mix
EQUINE MIX

Sgt Dan EZI-MIX is a barley based feed designed for horses in light to moderate work or spelling. Quality protein sources have been specially selected to provide the right balance of amino acids required for muscle tissue. The combination of these protein sources, New Zealand grown grains and molasses make this a highly palatable feed.

Vegetable oils and digestible fibre sources provide a source of cool energy while added enzymes help to improve the digestibility of starch contained in the grain component.

Sgt Dan EZI-MIX contains added macro and trace minerals as well as vitamins providing the essential nutrients required for good health and immunity.

Feeding Recommendations:

- Feed small amounts often (e.g. 2-3 meals a day) to avoid digestive upsets.
- Always introduce new feeds gradually.
- Always allow access to a good quality forage, with an expected forage intake of between 1.5 and 2% of the bodyweight of the horse each day.
- Ensure clean fresh water is always available.

Suggested feeding rates:

Feed **Sgt Dan EZI-MIX** according to the weight, body condition and workload of the horse. The amount of feed required will also depend on the quality and quantity of forage provided. The following feeding rates are a guide only.

Horse weight (kg)	Expected forage intake (kg DM/day)	Feeding rate (kg/horse/day)	
		Light Work	Moderate Work
350	5.3 - 7	1 - 1.5	1 - 2.5
400	6 - 8	1 - 2.5	2 - 3.5
500	7.5 - 10	1.5 - 3	2.5 - 4
600	9 - 12	2 - 4	3 - 5

Typical analysis *(As Fed Basis)*

Minimum Crude Protein (%)	12
Maximum Fat (%)	5
Estimated DE (MJ/kg)	12
Maximum Crude Fibre (%)	8
Maximum Salt (%)	1
Maximum Calcium (%)	1.1
Minimum Phosphorus (%)	0.5

Ingredients selected from:

Barley, Peas, Soyabean Meal, Copra Meal, Whole Sunflower Seeds, Lucerne Chaff, Vegetable Oils, Molasses, Limestone, Dicalcium Phosphate, Magnesium Oxide, Bentonite, Salt, Potassium Chloride, Amino Acids (e.g. Lysine), Vitamins and Trace Minerals, Mould Inhibitor, Enzymes.
