Spring Starter
DAIRY PELLETS
with Rumenox 200 Premix

For Animal Treatment Only

Contains 150mg/kg Monensin (As 750mg/kg Rumenox 200 Premix A011276) for increased milk protein production and as an aid in the control of ketosis.

The start of lactation is a particularly stressful period for dairy cows with significant physiological and hormonal changes impacting feed intake as well as digestion and metabolism of nutrients. Proper management of cows in early lactation to help maximise intake and minimise body condition loss will help to set cows up for a productive lactation.

Sgt Dan SPRING STARTER DAIRY PELLETS are formulated specifically to help balance conserved pasture available in early lactation and provide a source of high quality rumen by-pass protein from soya and canola to encourage milk production. Quality New Zealand grown grains provide a valuable source of carbohydrates to supply energy for both rumen microbes and the cow.

Ensuring adequate intake of macro and trace minerals in early lactation is essential to minimise the incidence of metabolic disease. **Sgt Dan SPRING STARTER DAIRY PELLETS** are formulated to provide added calcium, magnesium, sodium and essential trace minerals. Added chromium helps improve the efficiency of glucose utilisation by cells and supports feed intake in early lactation.

When fed at 2kgs per cow per day this diet provides:

- 25g of calcium (equivalent to 74g of limestone)
- 28g of magnesium (equivalent to 53g of magnesium oxide)
- 9g of sodium (equivalent to 23g of salt)
- 10mg of chromium
- 500mg zinc, 100mg manganese, 150mg copper, 6mg iodine, 8mg cobalt, 7mg **SELENIUM**, vitamins A, D3 and E.
- 300mg Monensin as 1.5g Rumenox 200 Premix.

Recommended feeding rate:

- Typically fed at 2kg per head per day, this feed can be fed at up to 4kg per head per day. Consult a nutritionist if higher feeding rates are required.
- This product is designed to be fed through an in-shed feeding system (or similar) where intakes per cow can be controlled.
- Exercise caution if high levels of other starchy feeds (e.g. wholecrop silage) are being fed at the same time.

Typical analysis (*Dry Matter basis*)

Minimum Crude Protein (%)	14
Maximum Fat (%)	5
Estimated ME (MJ/kg)	12
Typical NDF (%)	23
Typical ADF (%)	11
Typical Starch & Sugars (%)	42

Ingredients selected from:

Wheat, Barley, Grain By-Products, PKE, Soyabean Meal, Canola Meal, Peas, Vegetable Oils or Fats, Molasses, Limestone, Magnesium Oxide, Bentonite, Dicalcium Phosphate, Salt, Vitamins and Trace Minerals, Flavouring, Rumenox 200 Premix.

Additional Options:

Phosphorus, Vicomb P⁺, Betaine or other feed additives can be added on request.

Suitable for feeding to lactating dairy cows.

See reverse for additional information including Cautions and Contraindications

Spring Starter DAIRY PELLETS

with Rumenox 200 Premix

Additional Information:

Contains _____ mg/kg monensin (as _____ mg/kg Rumenox 200 Premix A011276) for increased milk protein production and as an aid in the control of ketosis.

Contraindications:

This product must not be used for growth promotion in ruminants intended for human consumption.

DO NOT treat cattle with products containing erythromycin, tiamulin or oleandomycin while using Rumenox 200 Premix. Severe growth depression may occur.

DO NOT exceed recommended dose rates.

Withholding periods: It is an offence for users of this product to cause residues exceeding the relevant MRL in the New Zealand (Maximum Residue Limits of Agricultural Compounds) Food Standard.

MEAT: Nil MILK: Nil

Rumenox 200 Premix is registered pursuant to the ACVM Act 1997, No A011276.

See www.foodsafety.govt.nz for registration conditions.

By law the user must take due care, obtaining expert advice if necessary to avoid unnecessary pain and distress when using the product other than as directed on the label.

Caution:

DO NOT allow dogs, horses or other equines access to feeds containing monensin. Ingestion by dogs and horses may be fatal to these animals.
